

DIGITAL RETINAL IMAGING CONSENT

We strive to provide our patients with the best care available. Using the latest in digital technology, we are able to take high resolution digital images of your retina. Imaging can reveal serious diseases and health problems, this helps Dr. Ferrucci assess the health of your retina and helps detect and manage eye and health conditions such as glaucoma, diabetes, and macular degeneration.

Digital Retinal Imaging is a special diagnostic procedure that consists of taking a photograph of the back of your eye (the retina). The procedure only takes a few minutes and is completely painless. No eye drops are required to take the photos. The images will serve as a baseline to monitor changes as we follow your eye health throughout the years. Below is a sample of a Retinal Image.

While insurance plans provide basic vision or eye health coverage, they do not currently include this advanced diagnostic testing. The fee for this procedure is \$39.00.

- Yes, I want to have Retinal Images taken as part of my examination.
 No, I am declining the recommendation to take Retinal Images.
